MONTHLY LOSS EXPOSURE - JAN 2024 TO JUL 2026

Peak \$5.56MM - average \$2.17MM per month. The full 31-month curve is on slide 2.
Jenny Hafidz Naufal - Advisor: Mr. Bayu Aji

The loss curve is going **up**, not down.

FIG. 1 - MONTHLY LOSS EXPOSURE, 31 MONTHS (KUSD)

Source: baseline Incident Database, 380 records x 23 columns. Red = Apr 2026 peak \$5.56MM. Dashed reading: 2026 run-rate \$2.64MM/mo vs 2024 \$1.97MM/mo (+34%).

BEHIND OVERDUE

56%

of exposure, ownerless

STALE > 1 YR

109

actions, oldest 926 d

- Six functions, six dashboards, six KPI definitions — hours validating before deciding.
- 220 actions open, 179 past due, median age 463 days.

What we inherited — **measured**, not asserted.

FIG. 2 — EXPOSURE BY FAILURE MECHANISM (PARETO)

Source: incident mechanism column. Blue = top 3 (205 of 380 cases, \$35.04MM = 52% of exposure). Red dashes = cumulative share.

FIG. 3 — WHERE THE MONEY IS, BY UNIT

Bar = loss USD. od = overdue actions behind that unit. Unit ZCU alone: \$11.11MM + 29 overdue.

Four sources in. **One governed table out.**

Every chart on every view reads the same incident table. Edit one record, every figure recomputes.

The executive view, in one screen.

FIX-FIRST PRIORITY - TAP A BAR, THE LIST FILTERS

Top 3 = 52% of exposure. Priority is money order, not loudest voice.

UNIT RANKING - LOSS WITH OVERDUE

- 8 KPI cards + trip logsheet: one row per trip, colored duration, follow-up dot.
- 0 charts without a data-provenance link.

109 actions are more than a year late.

AI suggests. Humans close.

SIMILAR-INCIDENT RETRIEVAL, BEFORE VS AFTER

LIFT

+17.9

pts vs thin baseline

- Tank > indication > prioritized alerts > tracked action with guidance.
- **Top-10** exposure plan in one click, owner + PM schedule each row.
- AI never closes an action. The PIC does.

Watch it degrade. 67 days of warning.

FIG. 5 - KO-3201 DE VIBRATION, 26 WEEKS (MICRON) - LIVE TRACE

Real condition history. Dot replays weeks 1-26 when this slide opens. ALARM week 10, TRIP week 21: 77 days to act.

Reading: press 8 to replay · State: READY

WARNING WINDOW PER ASSET - FIRST ALARM TO TRIP

Mean 67 days across 5 assets. All 5 RCA decks integrated (4P / 4M+1E, CAPA, PIC, PM schedule).

■ Signal > alarm > trip > loss > owner + CAPA — one tap from any row.

Four numbers we commit to moving.

Baseline = measured. Target = modeled commitment with basis stated, in the open.

Measured. Labeled. Out of scope.

MEASURED

- Loss, downtime, aging — 380 real records
- Retrieval 87.1% / 98.4% leave-one-out
- Warning 67 d from history

LABELED

- Energy = derived proxy, formula printed
- CCTV = illustration, aggregates real
- Defects listed in Data Governance

OUT OF SCOPE

- No live streaming (not required)
- No auto-closure (human-in-loop)
- No extra data beyond 2 declared

TEAM & NEXT

Jenny · Hafidz · Naufal

Advisor: Mr. Bayu Aji. Built from the official baseline only, plus two declared additions.

DECK + NARRATIVE

VOICE + DEMO

DATA + BUILD

1 - METER IT

5 metered energy tags replace the proxy

2 - CONNECT IT

EDMS / AIMS / Twin for asset context

3 - STREAM IT

PI live feed, decoupled already

One file. One truth. From data to decision.
